Building an eCommerce Solution Architecture

Vin D’Amico
President
vin@damicon.com
January 2002
Goals

- Introduce Damicon, LLC
- Define “Architecture”
- Show Sample Architectures
- Share Best Practices
- Compare Web Services
Who is DAMICON, LLC?

- Information Technology Advisors
- IT Help Desk Enhancers
- Adjunct CIOs
- IT Change Agents

It’s not about technology, it’s about business!
Core Competencies

- IT Process Reengineering
- Technical Consulting
- Program Management
- Planning and Execution Methodologies
- Joint Requirements Planning
- IT Training and Mentoring
- IT Staffing
What is Architecture and Why is it Important?
“A common mistake that people make when trying to design something completely foolproof is to underestimate the ingenuity of complete fools.”

- Douglas Adams, Author
Architecture Definition

Formal description of a system at the component level.

The structure of components, their interrelationships, and the principles governing their design and evolution over time.
Why Architecture?

- Lower software development, support, and maintenance costs
- Improved interoperability and easier system and network management
- Simpler upgrade and exchange of system components
- Reduced complexity in IT infrastructure
- Flexibility to make, buy, or outsource IT solutions
Architecture is Critical In…

- Delivering an enterprise-computing system
- Providing control points to manage complexity
- Maintaining system integrity
- Unifying component structure
- Organizing people and processes
- Generating rules for growing the system
- Protecting an enterprise system
Architecture Goals

1. Accommodate Change
2. Adhere to Standards
3. Scale as Business Grows
4. Provide Full Functionality
5. Deliver Low Response Times
6. Be Reliable
7. Interoperate with Other Systems
8. Provide Robust Security
9. Be Simple to Manage
10. Service International Users
Architecture Elements

- Personal Systems
  - Desktops, PDAs, Phones, Pagers, etc.
- Network Components
  - Routers, Load Balancers, Switches, etc.
- Security Elements
  - Firewalls, Encryption, VPNs, etc.
- Servers
  - Web, App, DB, Directory, etc.
- Application Components / Web Services
  - Packaged and/or Custom
- Data
  - Local, Remote, Internal, External
Examples of Architecture
Basic 3-Tier Architecture

Users

Web Server(s)

Application Server(s)

Database Server(s)

Database(s)
Complex Distributed Architecture

- Infrastructure Services
- Administration Services
- Transaction Processing
- Data Management
- Presentation Services
- Personal Services

Security Overlay

Network Overlay
### Personal Services

<table>
<thead>
<tr>
<th>Any Browser-based Device:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Desktop</td>
</tr>
<tr>
<td>Laptop</td>
</tr>
<tr>
<td>Handheld</td>
</tr>
<tr>
<td>Phone</td>
</tr>
<tr>
<td>Appliance</td>
</tr>
<tr>
<td>etc.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Best Practices:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adhere to Standards</td>
</tr>
<tr>
<td>Avoid Browser-Specific Features</td>
</tr>
<tr>
<td>Minimize Decision Logic</td>
</tr>
<tr>
<td>Use Java or C# for Complex Functions</td>
</tr>
</tbody>
</table>
Presentation Services

- Formatting Logic
- Dynamic Content Delivery
- Portlets
- Reporting
- Internationalization

- Best Practices:
  - Separate Data Retrieval from Formatting
  - Don’t Mix Business Rules and Display Logic
  - See Model-View-Control and Layer Patterns
Data Management Services

- Searching
- Categorization
- Content Aggregation
- Group Collaboration
- Personalization
- Distribution

- Best Practices:
  - Identify User Types
  - Focus on User Goals
  - Consider Performance
  - See Presentation-Abstraction-Control and Chain of Responsibility Patterns
<table>
<thead>
<tr>
<th>Transaction Processing Services</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Transaction Management</strong></td>
</tr>
<tr>
<td><strong>Metadata Control</strong></td>
</tr>
<tr>
<td><strong>Application Interfaces</strong></td>
</tr>
<tr>
<td><strong>Business Rules</strong></td>
</tr>
<tr>
<td><strong>Data Interchange</strong></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Best Practices:</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>• Focus on Interfaces</td>
</tr>
<tr>
<td>• Beware Incomplete User Activities</td>
</tr>
<tr>
<td>• Think Services</td>
</tr>
<tr>
<td>• Do Not Hard Code Business Rules</td>
</tr>
<tr>
<td>• See Adapter, Façade, Proxy, Observer and, Broker Patterns</td>
</tr>
</tbody>
</table>
### Administration Services

<table>
<thead>
<tr>
<th>Directory Services (LDAP)</th>
<th>Best Practices:</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Administration</td>
<td>• Define Policies</td>
</tr>
<tr>
<td>State Management</td>
<td>• Control System States</td>
</tr>
<tr>
<td>Session Management</td>
<td>• Anticipate Growth</td>
</tr>
<tr>
<td>User Controls</td>
<td>• See Command and Microkernel Patterns</td>
</tr>
<tr>
<td>Rules Definition</td>
<td></td>
</tr>
<tr>
<td>Infrastructure Services</td>
<td></td>
</tr>
<tr>
<td>-------------------------</td>
<td></td>
</tr>
<tr>
<td>Data Access</td>
<td></td>
</tr>
<tr>
<td>Communications</td>
<td></td>
</tr>
<tr>
<td>Process and Thread Management</td>
<td></td>
</tr>
<tr>
<td>Sun One and MS .Net</td>
<td></td>
</tr>
<tr>
<td>Content Repositories</td>
<td></td>
</tr>
<tr>
<td>Best Practices:</td>
<td></td>
</tr>
<tr>
<td>Adhere to Standards</td>
<td></td>
</tr>
<tr>
<td>Understand Data</td>
<td></td>
</tr>
<tr>
<td>Model Data</td>
<td></td>
</tr>
<tr>
<td>Manage Data</td>
<td></td>
</tr>
<tr>
<td>See Abstract Factory and Mediator Patterns</td>
<td></td>
</tr>
</tbody>
</table>
### Security Overlay

<table>
<thead>
<tr>
<th>Hardware Firewalls</th>
<th>Best Practices:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Software Firewalls</td>
<td>• Establish Policies</td>
</tr>
<tr>
<td>SSL and WTLS</td>
<td>• Secure the Perimeters</td>
</tr>
<tr>
<td>VPN’s</td>
<td>• Monitor for Intrusions</td>
</tr>
<tr>
<td>Encryption</td>
<td>• Stay Aware</td>
</tr>
<tr>
<td></td>
<td>• Patch, Patch, Patch</td>
</tr>
</tbody>
</table>
### Network Overlay

<table>
<thead>
<tr>
<th>Routers</th>
<th>Load Balancers</th>
<th>Switches</th>
<th>Gateways</th>
<th>Modems</th>
<th>Hubs</th>
<th>Cabling</th>
</tr>
</thead>
</table>

**Best Practices:**
- Separate Major Workgroups
- Separate Major Applications
- Constantly Review Structure
- Document, Label, Diagram
Web Services

- Major Players
  - IBM (WebSphere)
  - Microsoft (".NET")
  - Sun Microsystems (Sun ONE)

- Problem Space
  - Distributed Applications
  - Interoperability

- Solution Space
  - XML
  - Interfaces
Web Services
Think Interfaces!

Sun ONE
J2EE
JDBC
JVM
Java
EJB
JSP
JNDI
JAX_

MS .Net
Win XP
ODBC
MSIL
CLR
C#
VB.Net
ASP.Net
ADO.Net

SOAP
WSDL
UDDI
XML
